Chemical Physics is published semi-monthly. The 1985 subscription price per volume is Dfl. 262.00 (approx. \$ 97.00) excluding Dfl. 22.00 (approx. \$ 8.10) postage and handling. Claims for issues not received should be made within three months of publication. If not, they cannot be honoured free of charge.

Subscriptions should be sent to the publisher: ELSEVIER SCIENCE PUBLISHERS B.V., Journals Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands, or to any subscription agent or bookseller.

Special regulations for authors. Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Submission to this journal of a paper entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S.351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.

Special regulations for readers in the USA. This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 and 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US \$ 2.25, also payable through the Center. This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

INFORMATION TO AUTHORS

Papers in all areas of Chemical Physics are welcomed, but referees will be asked to judge whether experimental papers have been brought into sufficient relation with theory, and whether theoretical papers bear on experimental verification or exhibit progress in experimental developments to this end.

Contributions written in clear English should be sent *in triplicate* to one of the editors. Contributions may also be submitted to a member of the Advisory Editorial Board who is familiar with the research, in which case *two copies plus the original figures* should be sent simultaneously to one of the editors. In any event, all manuscripts will be refereed at the discretion of the editors.

Authors from the Americas, the Far East and Australia should submit their papers to the American editor; those from Europe, the Near and Middle East and Africa should deal with the European editor.

Manuscripts submitted should be first copies (or clear Xerox copies thereof) typed with double spacing and wide margins; all pages should be numbered, and the text arranged into paragraphs. Before mailing the manuscripts, please check the following points:

1. **Title:** The title should be chosen for its sufficient information content such that it conveys to the informed reader the particular nature of the contents he can expect from the paper. When the length exceeds 45 letters, an abbreviated running title should be indicated.
2. **Abstract:** The abstract of 100–150 words should contain all the substance of the methods and the results achieved as well as keywords of the paper.
3. **Address:** The name(s) of the author(s) and the name and address of the institute, where the research work was done should be indicated on the manuscript. Proofs will be sent by the publisher to this address, unless specifically requested otherwise.
4. **Figures:** The drawings for the figures must be submitted on separate sheets, drawn in black India ink in large size and carefully lettered (with the use of stencils). The lettering as well as the details should have proportionate dimensions so as not to become illegible or unclear after the usual reduction by the printers; in general the figures should be designed for a reduction factor of two or three. Each figure should have a number and a caption; the captions should be collected on a separate sheet. The appropriate place of a figure should be indicated in the margin. Your figure material will be returned after publication of the article.
5. **Formulae:** Displayed formulae should be numbered and typed or clearly written by hand. Vectors will be printed in bold-face italics (heavy, slanting type), and should be indicated by a wavy underlining in the type-script.

Special attention should be paid to characters that can easily be misread, such as i (lower case), I (cap.), l (el), 1 (one), ' (prime), o (lower case), O (cap.), 0 (zero), ° (degree), u, v (vee), ν (Greek nu), V (cap.), x, X, χ , z, Z, p, P, ρ (Greek rho), etc.

6. **Tables:** Tables should be typed on separate sheets. Each table should have a number and a title. The appropriate places for the insertion of the tables should be indicated in the margin.
7. **References:** In the text, reference to other parts of the paper should be made by section (or equation) number, not by page number. References to other papers should be consecutively numbered in the text and should be listed by number, preferably as in the following examples:

For a book: A. Messiah, Quantum mechanics, Vol. 1 (North-Holland, Amsterdam, 1970).

For a paper in a journal: C.J. Winscom and A.H. Maki, Chem. Phys. Letters 12 (1971) 264.

For a paper in a contributed volume: A. Carrington, in: Magnetic resonance and radiofrequency spectroscopy, ed. P. Averbuch (North-Holland, Amsterdam, 1968) p. 23.

For an unpublished paper: G.J. Lycett, Ph.D. Thesis, University of Birmingham, England (1970).

8. **Footnotes:** As far as possible, footnotes should be avoided.

Upon acceptance of an article by the journal, author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Quantum Collision Theory

by CHARLES J. JOACHAIN, *Université Libre de Bruxelles, Belgium*

1975. 2nd repr. 1983 as a 1-vol. paperback edition
Price: US \$32.00/Dfl. 100.00.

xvi + 710 pages.
ISBN 0-444-86773-2

COMMENTS FROM THE PRESS:

"Joachain is certainly well qualified to write a treatise on scattering theory. As the numerous references in each chapter indicate, he has many papers on the subject and has written many other papers jointly with several of the major contributors to the subject . . . this is an excellent book."

Physics Today

"... this book is highly recommended, both for an advanced graduate course and for self study. In addition, its conciseness makes it an excellent reference book, and topped with a very extensive subject index . . . the book leaves the impression of extremely thorough work, both by the author and the publisher."

Radiation Effects

This book, first published in 1975 as a hardbound edition and reprinted in 1979 as a two-volume paperback, is now available in paperback in one volume. Over the years it has been unanimously praised and has become a standard text in its field.

The purpose of the book is to give a self-contained and unified presentation of the methods of quantum collision theory, with applications to atomic, nuclear and high-energy processes. It is primarily aimed at graduate students in theoretical physics, although any physicist whose main interest lies in microphysics will also find it a useful reference.

CONTENTS: PARTS: I. Description of Collision Processes. 1. Basic Definitions. 2. Kinematics. Problems. **II. Potential Scattering.** 3. Potential Scattering: General Features. 4. The Method of Partial Waves. 5. The Integral Equation of Potential Scattering. 6. The Coulomb Potential. 7. The Scattering of Identical Particles. 8. The Born Series. 9. Semi-Classical Approximations. 10. Variational Methods.

11. Analytic Properties of Scattering Amplitudes. 12. Time-Dependent Potential Scattering. Problems. **III. General Scattering Theory.** 13. Quantum Dynamics. 14. The Collision Matrix. 15. Transition Probabilities and Cross Sections. 16. The Determination of the Collision Matrix. 17. Two-Potential Scattering. **IV. Applications.** 18. Two-Body Collisions. 19. Three-Body Problems. 20. The Optical Potential. 21. Topics in Multiparticle Collisions. Appendices. Indexes.
